# TDF NUMBERS

©The Document Foundation 07/2012

The entire infographic has been created using LibreOffice 3.5.5. Data parsed by Ohloh and by various scripts from the six GIT repositories (binfilter, build, core, dictionaries, help, translations) has been plotted with Calc, using the integrated Chart feature, and then copied and pasted into a custom size Draw document, where the visual have been tweaked to get a consistent look & feel. Once completed the process, each element has been copied and pasted into the custom size Draw document, where the final touches - frame, gradient background and text boxes - have been added to get to the final result. The file has then been exported to Hybrid PDF, a format which looks like an ordinary PDF to any other software but embeds the ODG document and can be opened as such for editing using LibreOffice. For the sake of transparency, The Document Foundation's committer and commit figures exclude contributions to web and wiki pages.
